

- ✚ Structured collection records.
- ✚ Database is a collection of *logically related data* and *its description* that are shared together by various categories to cater the information needs of an organization.

Database

Shared, integrated computer structure that house a collection of :

a) End user (raw data ~ not process data)

Raw facts about something

e.g.: Hazeq, 0102539937

b) Meta data (data about data)

Know as System Catalog / data dictionary

e.g.: Name : VARCHAR(10)
